

TASK

Capstone Project III

Visit our website

Introduction

Welcome to The Data Visualization Capstone Project!

Great job! You have reached the final capstone project for this level of the bootcamp. For this task, we will be applying both our data analytics and visualization skills to a real-life data set.

Get in touch
Connect for support

Remember that with our courses, you're not alone! You can contact your mentor to get support on any aspect of your course.

The best way to get help is to login to www.hyperiondev.com/portal to start a chat with your mentor. You can also schedule a call or get support via email.

Your mentor is happy to offer you support that is tailored to your individual career or education needs. Do not hesitate to ask a question or for additional support!

As you have already learned in this Bootcamp, as a Data Scientist you need to be able to display a very important set of skills. You need to be able to write code that can be used to clean, organize, analyse and visualise data. These coding and analytical skills need to be combined with the ability to communicate your findings to stakeholders effectively.

In this task, you will be given the opportunity to showcase all the skills which you have been developing throughout this bootcamp. You will be tasked with analysing a dataset of your choice. Furthermore, you will create a report that contains several data visualizations that will clearly communicate your findings. Finally, you will present your report to your mentor.

You are free to choose any dataset of your choice to analyse. Here are some sources of datasets:

- [United Nations datasets](#)
- [South African Open Data](#)
- [World Bank Data](#)

Your report should include the following:

- A brief description of the dataset you have chosen
- A description of how your dataset was cleaned
- A description of how you managed missing data
- A detailed description of your findings accompanied by appropriate visualizations
- A wide selection of appropriate data visualizations. Besides Matplotlib, we encourage you to explore and use libraries other than with more interesting visualizations

A template for the report (EDA.docx) accompanies this task.

Ensure that your report is professional! Remember, such a report can be added in your professional portfolio.

Capstone Project

- Select a dataset. **Note:** Once you've selected a dataset please make sure to check it with your mentor before starting.
- Create the report as described in this task.
- When you submit your report for review, also book a call with your mentor so that you can present your report and findings to your mentor.

Once you have completed the task in line with the instructions above, click the button below to request your mentor to review your work and provide feedback. If you have any questions while attempting the task, leave your mentor a note on the comments.txt file in your Student Dropbox folder.

Completed the task(s)?

Ask your mentor review your work!
